

Quality Program Support for Health Systems:

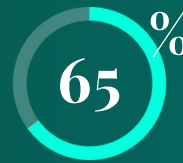

Turn Risk into Reward with Real-World Evidence (RWE) from Atropos Health

Transform your data into powerful evidence to inform care-enhancing and cost-cutting clinical decisions – all while benchmarking your success against national performance metrics to continue outperforming the industry in at-risk programming.

Health Systems are Largely Lacking the Right Technological Partner to Help them Achieve their Quality Goals

of healthcare executives cite 'improving clinical quality' as their top clinical priority for using analytics, and yet...

say their organization has clinical quality analytics applications but they haven't used them due to a lack of strategic direction, data expertise, financial resources, and/or training and education.

Our Solution is Packaged for Your Performance

Alexandria™ comes complete with everything you'd expect from the most comprehensive library of RWE. With pre-populated publication-grade observational research studies – called Prognostograms – organized into library content, health systems are equipped with all the evidence needed to make highly effective program and policy decisions.

For any additional clinical questions, we also offer the Green Button Informatics consult service that unlocks on-demand answers backed by RWE and generated in just a matter of minutes.

Top books within our library of content include:

- Chronic Care Management
 - Diabetes management
 - Chronic obstructive pulmonary disease
 - Chronic kidney disease
 - Congestive heart failure
- Surgical Procedures
 - Orthopedic
 - Cardiovascular
 - Otolaryngology
 - Gastrointestinal
- Oncology
 - Breast cancer

Follow our 3-Part Approach to Turn Data into Quality Performance

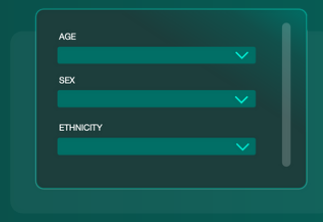

We offer a highly intelligent and intuitive live evidence dashboard that empowers health systems to easily discover brightspots and best practices, act on their insights backed by RWE, and drive quality exceptional outcomes for greater quality program performance.

01 DISCOVER

Uncover national best practices backed by thousands of studies to strengthen your QI strategies

02 ACT & MONITOR

Select multiple outcomes of interest and subpopulation demographics, including SoDH, to take impactful action

03 ACHIEVE

Measure the success of your interventions in real-time to deliver higher quality, lower cost outcomes

Our Unique Process is Powered by a Virtuous Model for Superior QI Performance

Bolstered by a network that continues to grow stronger with every query, question, and report, Atropos Health supports health systems to drive superior quality results at a speed, scale, and standard that raises the bar for the rest of the industry to follow.

ACTION TO OUTCOMES

- Measure the success of your interventions based on RWE
- Deliver higher quality, lower cost clinical outcomes
- Secure higher reimbursements for quality program performance
- Leverage RWE to negotiate favorable contracts with payors

SPEED TO INSIGHT

- Receive RWE reports in minutes, not days, to heighten staff efficiency by 50x
- Discover national best practices to inform your quality strategy
- Uncover your health system's brightspots and areas of improvement to fine-tune your focus
- Consult live evidence dashboards with thousands of studies within each therapeutic area

INSIGHT TO ACTION

- Perform personalized medicine at scale based on insights from specific subpopulations, accounting for SDoH and other key demographic factors
- Arm your VBC committee with RWE to tailor Population Health guidelines and optimize care management for several subpopulations at once
- Target multiple outcomes of interest to pinpoint key results, monitor progress, and optimize performance. **Sample outcomes include: length of stay (LoS), ICU survival, never events, readmission rates, and more**

Real Results with RWE

See how this AMC Improved Outcomes and Lowered Costs by Applying RWE to Patient Throughput, Care Management, and Formulary Optimization

Using a range of RWE-backed studies for several therapeutic areas, this AMC identified opportunities to take targeted action on valuable insights to reduce LoS and save significant costs.

 **\$1,617,000**

in total cost savings from patient throughput and care management.

Findings spanned:

BMT **Septic Shock**

Resident Training

 **\$567,723**

in annualized drug cost savings enabled by formulary optimization and treatment decisions based on comparative effectiveness research.

Furthermore, these results were informed by just **three pharmacy QI projects** – skyrocketing the time-to-value.

BONUS!

Installation is completed in only **12 to 16 HOURS**

Ready to see the QI results your health system could drive with RWE?
